GitHub Copilot, helped me to write most of the code, I just copied the tasks instructions from pdf to VS Code as comments, then Copilot wrote the most functions' code.

I added the following changes :-

1- changes to format the output by adding new lines after each print() function.

2- Copilot gave me two paths for finding the treasury, I changed to one path only.

3- I added a break statement after the player found the treasury.

4- Validate the player name by adding the following comment and Copilot wrote the code

```
# restrict the name to be valid (non-empty) and
just alpha. if invalid ask again.
```

5- I added the following comment to restrict the user input, and Copilot wrote the code

```
 # limit the user input to 1 or 2 just. in case of
invalid input the player should retry to input
again.
```

I suggest to add more choices and paths in the next versions of this project.

Thanks,,,
